# **Product Functions**

This product allows the network administrator to detect devices (such as printers, scanners, copy systems, and so on) or wireless print adapters on the network, and then setup or change functions for the network devices individually or as a batch. Gathered and stored configuration information can be output to an external file. This file can then be used to restore previous settings created by the user at any time. The administrator's workload can be reduced by performing batch setups for multiple devices on the network.

- □ You can make settings or changes for individual network devices or all network devices as a batch.
- □ You can output configuration information for the network device as a SYLK format file. Because the SYLK format is supported by Microsoft Excel, the user can make batch settings or changes to the configuration information for multiple devices.
- □ Previous configuration information is stored as a log, and the file can be output or changed. By performing a batch import of the file, you can restore the settings for individual or multiple network devices.
- □ For multi-function printers, you can import an abbreviated number for the fax or the email allowing you to save, edit, or export (for supported models only).
- **D** The administrator can set a password to protect the network device's configurations.
- **Q** You can simplify device management by registering the device to My Device.
- □ As well as devices on the local network, you can also make settings or changes to devices on an external network (you need to change Search Parameters).

#### Note:

- **D** The batch setting function is only available for Windows versions.
- □ *In the EpsonNet Config Portable edition, the log file is deleted when the application is closed.*

## Workflow

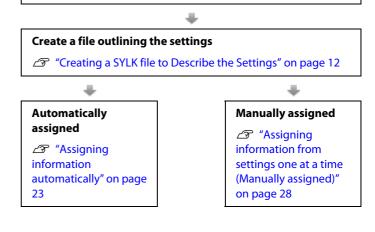

### **First Time**

#### Make device settings one at a time

"Setting or Changing Devices One at a Time" on page 7

#### Make batch settings for multiple devices

 $\ensuremath{ \ensuremath{ \en$ 

### Change the device's settings

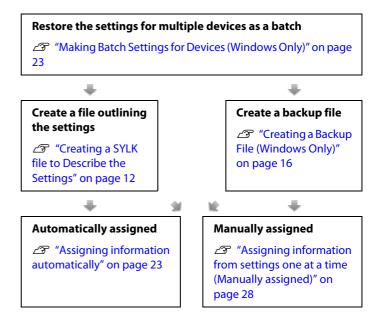

#### Make device changes one at a time

"Setting or Changing Devices One at a Time" on page 7

### **Restore the device's settings**

Restore the device's settings one at a time "Setting or Changing Devices One at a Time" on page 7

The following section provides a detailed explanation for how to make each setting. This guide focuses on making network item settings for network-connected devices.

# Setting or Changing Devices One at a Time

This section explains how to configure one device at a time using EpsonNet Config.

2

Start EpsonNet Config, and then change Filter to Network-connected devices.

The default is (All). For inkjet label printers, select **USB-connected devices** and **COM-connected devices** if necessary.

000000000 x000000000 x0000000000000000	Refresh 📑 Con	figuration 🚛 Launch I	Browser	Filter: (All)
Model Name         MAC Address         IP Address         Network-connected devices           DXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX		MAC Address		(AII)
0000-00000 x00000000 x000-0000 x00000000		MAC Address	IP Address	
	XXC-XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX	X0000000000X X000000000X	X00CX00CX00CX00C	

Select the device you want to configure.

If the device is not displayed, check that the device or wireless adapter is turned on, or if the same segment as the computer has the device or wireless adapter. Set **Tools** - **Options** - **Search Parameters** to display devices outside the local network, or COM-connected devices.

evice( <u>D</u> ) Display( <u>V</u> )	Tools(I) Help(H)		
EpsonNo Config			EPSON
💦 Refresh 🚦 C	onfiguration 🗾 Launch	Browser	Filter: Network-connected devices
lodel Name	MAC Address	IP Address	
0000000	3000000000000	200(200(200(200(200)	ה
00-00000	X0000000000X	2000/2000/2000	
ess the [F5] key to refre			Ready

#### Note:

□ If the model name is not displayed...

The model name may not be displayed if the IP address for the network I/F stays at the default setting (192.168.192.168). In this case, you need to determine the device using the MAC address. Although you can check the MAC address on the network status sheet, for scanners and inkjet label printers you can check the sticker on the base of the network I/F. Some ink jet printers can also be identified on the control panel. Due to page printer model specifications, the default IP address (192.168.192.168) cannot be used on a network. Make sure you match the device to the current environment and change the IP address.

- Devices that use wireless LAN, such as inkjet label printers, may not be displayed because their default setting is ad-hoc mode. In this case, set the computer's wireless LAN environment to ad-hoc mode.
- □ When identifying and selecting devices with the same model... Use the MAC address to distinguish between multiple devices with the same model. Although you can check the MAC address on the network status sheet, for scanners and inkjet label printers you can check the sticker on the base of the network I/F. Some ink jet printers can also be identified on the control panel.
- □ When displaying devices outside the local network or zone... When the device is outside the computer's local network, click **Tools** - **Options** - **Search Address**, and set the search address on the Search Address screen to display the device.
- □ After selecting the device, you can start the Web-based EpsonNet Config by clicking **Launch Browser**. If you cannot start by clicking Launch Browser, check that the IP address has been changed from its default setting, or that the IP address is not all ready in use.
- □ To register to My Devices...

Select the device you want to register, and then click **Device** - **Register to My Device** or right-click to display Register to My Device, and register the device. When registered, a star appears on the product name icon. This is useful for managing a specific device because only devices that you have registered in Filter are displayed when you register your device.

#### Click Configuration.

It can take up to three minutes until the settings are enabled. Do not turn off the device or wireless adapter during this time.

Click Refresh, and then check that the icons for the settings in list view have changed from gray to green.

- □ If the icons remain gray after three minutes has passed, check the status of the device or the wireless adapter.
- □ If the icon changes from gray to red, communication with the IP address could not be completed. Check that the IP address is enabled in the environment being used.

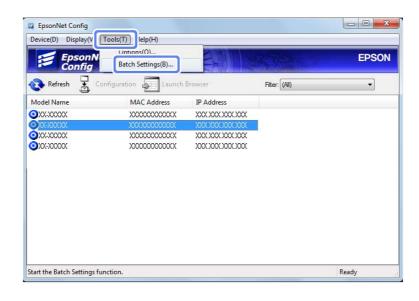

# **Creating a SYLK file to Describe the Settings**

You can create a SYLK file to describe information for performing batch settings. You can create a SYLK file using one of the following methods.

# Creating a SYLK file by acquiring information from the connected device (Windows only)

Start EpsonNet Config, and then click Tools - Batch Settings.

The Batch Settings screen opens and a list of available devices is displayed. It may take a while before all devices, such as devices on a network, are displayed. If the device is not displayed, check that the device or wireless adapter is turned on, or if the same segment as the computer has a device or wireless adapter.

1

#### Click File - Save as.

213	802_3_LinkSpeed_Duple	0	#NULL#	Ó	#NULL#	

#### Note:

6

Security items, such as passwords, or read-only items are not output.

When making a batch change to the Administrator Password, add an "AdminNewPassword" column to the SYLK file, and then enter the new password. Also, if you wan to automatically authorize the new password (without having to enter a password confirmation), add a column called "AdminCurrentPassword".

# Creating a new SYLK file

Using the MAC address and model name as the keys, you can create a new SYLK file to set the IP address.

Open a spreadsheet application (such as Microsoft Excel) or a text editor.

Enter "Info\_MACAddress", "Info\_ModelName", and "TCPIP\_IPAddress" in the first column as the setting item names.

Enter setting items for the following text strings. To distinguish between upper case/lower case and double-byte/single-byte characters, if only one character is different, the item will not be recognized. Enter the setting item name as described below; otherwise, EpsonNet Config cannot recognize the setting items.

Info_MACAddress		
Info_ModelName		
TCPIP_IPAddress		

Enter the MAC address, model name, and IP address for each network interface.

Info_MACAddress	0000XXXX0001	0000XXXX0002	0000XXXX0003	0000XXXX0004
Info_ModelName	ALC-XXXXX	ALC-XXXXX	ALC-XXXXX	ALC-XXXXX
TCPIP_IPAddress	192.168.100.102	192.168.100.103	192.168.100.104	192.168.100.105

Enter a name and save as a SYLK file (\*.slk).

# **Creating a Backup File (Windows Only)**

This section explains how to create a device backup file using EpsonNet Config.

### Creating a backup file for all devices

1

Start EpsonNet Config, and then click Tools - Batch Settings.

The Batch Settings screen opens and a list of available devices is displayed. It may take a while before all devices, such as devices on a network, are displayed. If the device is not displayed, check that the device or wireless adapter is turned on, or if the same segment as the computer has the device or wireless adapter.

# Creating a backup file for a selected device

#### Note:

1

2

Open the SYLK file created in "Creating a backup file for all devices" in a spreadsheet application (such as Microsoft Excel) or a text editor, and then follow the steps below to create a file by deleting the rows for unnecessary devices, and then saving the file.

See the following for "Creating a backup file for all devices".

#### Start EpsonNet Config, and then click Tools - Batch Settings.

The Batch Settings screen opens and a list of available devices is displayed. It may take a while before all devices, such as devices on a network, are displayed. If the device is not displayed, check that the device or wireless adapter is turned on, or if the same segment as the computer has the device.

EpsonN Config	Untions(O) Batch Settings(B)			EPSON
_		Browser	Filter: (All)	•
Model Name	MAC Address	IP Address		
OX00000	XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX	2000,2000,2000,2000		
0000000	000000000000000000000000000000000000000	200020002000		
OXX-XXXX	XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX	2000200020002000	-0	
OXX-XXXX	X000000000XX	XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX		

Select the devices for which you do not want to create a backup file, and then click **Tools** - **Release Assign**. Click **Yes** when the confirmation message is displayed, and the Status column changes to Unassigned.

When releasing multiple devices, repeat this step until you only have the devices for which you want to create a backup file.

# Making Batch Settings for Devices (Windows Only)

This section explains how to make batch settings for multiple devices using EpsonNet Config. See the following for explanations of each item on the Batch Settings screen.

## Assigning information automatically

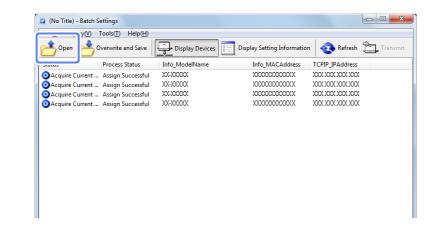

M	

Start EpsonNet Config, and then click Batch Settings.

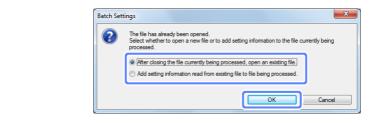

Click Open.

#### Note:

*If the SYKL file is already opened, the following confirmation screen is displayed. Select how you want to open the file, and then click* **OK***.* 

Select the SYLK file (\*.slk) containing the settings, and then click **Open**.

4 Select the devices for which you want to perform batch settings with the Status column set to **Unset**, and the Process Status set to **Assign Successful**.

When making multiple selections, press Ctrl or Shift and click or drag your mouse,

Status Process Status Info_ModelName Info_MACAddress TCPIP_IP	
	.xoox.xoox
Unset Assign Successful XX-XXXXX XXXXXXXXXXXXXXXXXXXXXXXXXXXX	3000,3000
Unset Assign Successful XX-XXXXX XXXXXXXXXXXXXXXXXXXXXXXXXXXX	2000,2000

#### Information transmission status

lcon	Status	Process Status	Explanation
8	Unset	Assign Successful	The information file has been read successfully, and the information has been assigned. Assigned information can be transmitted to each device.
8	Unset	Setup Failed	Cannot perform setup. Check the status of the connected device. Also, check the description in the settings file. Information can be sent.
0	Setup Complete	Setup Successful	Information transmitted successfully and reboot performed.
0	Setting Value Match	Assign Successful	Setting values are the same as the read-in settings file. Although information can be transmitted, setup has already been performed and so the information does not need to be transmitted.
0	Acquire Current Setting Value	Assign Successful	Current settings have been acquired from each device. Although information can be transmitted, the settings are the same as the current device and so the information does not need to be transmitted.

3

lcon	Status	Process Status	Explanation
⊗	Unassigned		Information cannot be assigned to each device using the read settings file.
⊗	Unassigned	Assign Failed	Assignment failed. <sup>*1</sup>
•	Unset	Searching	Searching for the device indicated in the settings file. *2
0	Setup Complete	Searching	Searching for the device indicated in the settings file. *2
٢	Setup Complete	Rebooting	Rebooting after successful transmission of settings.
8	Unset	Search Failed	Cannot find the device. Check that all devices are turned on. *2
!	Cannot Set	Invalid Check Results	There is an error in the setting file descriptions. Follow the steps below to check the descriptions.
			<ol> <li>Double-click the device that contains the error to open the Display Details screen, and then check items in Check Results that are marked as NG.</li> <li>Double-click the NG item and correct the setting directly, or correct the setting file contents, and then start again from step 2.</li> </ol>
0	Setup Complete	Search Failed	A timeout occurred while searching for the Setup Complete status. <sup>*2</sup>
0	Setup Complete	Reboot Failed	Cannot confirm the device after transmitting settings. Check that the device is turned on, or if it has rebooted normally.

#### Information cannot be transmitted

\*1 Only when the device is displayed.

\*2 Only when setting information is displayed.

#### Click Transmit.

0	Setup Complete	Search Failed	Cannot check devices that have already been setup. Check that the device is turned on, or if it has rebooted normally. *

\* Only when setting information is displayed.

# Assigning information from settings one at a time (Manually assigned)

Create a file describing the IP address, subnet mask, and the default gateway, and select one device at a time to make settings.

### Create a file outlining the settings

Open a spreadsheet application (such as Microsoft Excel) or a text editor.

Enter "TCPIP\_IPAddressAuto", "TCPIP\_IPAddress", "TCPIP\_SubnetMask", and "TCPIP\_Gateway" in the first column as the setting item names.

Enter setting items for the following text strings. To distinguish between upper case/lower case and double-byte/single-byte characters, if only one character is different, the item will not be recognized. Enter the setting item name as described below; otherwise, EpsonNet Config cannot recognize the setting items.

TCPIP_IPAddressAuto		
TCPIP_IPAddress		
TCPIP_SubnetMask		
TCPIP_Gateway		

#### Note:

1

2

Create a file without MAC address information. Because the MAC address is automatically set as the key for use by default, information is assigned automatically when a MAC address is found, and manual assignment cannot be performed. You can change the automatically assigned keys for use in Tools - Options - Auto Assign - Auto Assign Key Settings on the Batch Settings screen.

### Enter the values in each column.

"TCPIP\_IPAddressAuto" specifies the setting method for assigning the IP address. If the setting value is "5", the static IP address is manually assigned.

TCPIP_IPAddressAuto	5	5	5	5
TCPIP_IPAddress	192.168.100.102	192.168.100.103	192.168.100.104	192.168.100.105
TCPIP_SubnetMask	255.255.255.0	255.255.255.0	255.255.255.0	255.255.255.0
TCPIP_Gateway	192.168.100.101	192.168.100.101	192.168.100.101	192.168.100.101

### Reading the configuration file and making settings one at a time

Start EpsonNet Config, and then click **Tools** - **Batch Settings**.

EpsonN Config	Batch Settings(B)	Em.		EPSO
💽 Refresh 🗧 C	onfiguration	Browser	Filter: (All)	•
Aodel Name	MAC Address	IP Address

Click **Transmit**, and then click **OK**.

# **Registering Different Address Books**

You can import e-mail addresses, target folders, abbreviated fax numbers, and so on from a product and edit the data.

#### Note:

This function is only available for supported models. See the Epson Web site for more information on supported models.

### **Editing individually**

Select the device you want to configure.

If the device is not displayed, check that the device or wireless adapter is turned on, or if the same segment as the computer has a device.

#### Click Configuration.

Click the item you want to edit from Scan - Mail Settings/Target Folder for scanners, Fax - Reception - FAX to Folder/E-Mail or Fax - Fax Number for faxes, or Common - Contacts.

See the following for detailed information for each item.

# **Setting an Administrator Password**

You can use an administrator password to protect device settings. The password is not set by default.

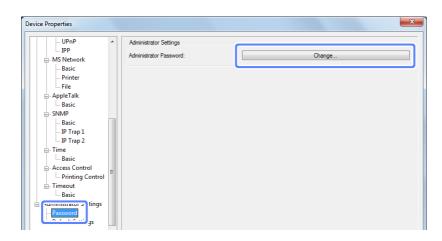

Select the device you want to configure.

If the device is not displayed, check that the device or wireless adapter is turned on, or if the same segment as the computer has a device.

#### Click Configuration.

Click Administrator Settings - Password, and then click Change.

5

Enter the password in New Password and Reenter New Password, and then click OK.

dr	ministrator Password
	Administrator Password
1	New Password:
	••••••
	Reenter New Password:
	••••••
	Note: After clicking OK, the new password does not take effect immediately. The new password takes effect after the settings have been transmitted.

Click **Transmit** to set the necessary items.

It can take up to three minutes until the settings are enabled. Do not turn off the device or wireless adapter during this time.

#### Note:

- □ The device passwords are common for each application used in network settings. Make sure you manage the password carefully.
- □ If you forget the password, see the documentation provided with the device to restore the default settings. Also, the password is not reset even if the printer's built-in network I/F is returned to its default settings. Contact the Epson sales company if you forget the password.

# Setting Items for the SYLK File

This section explains the main settings that can be set in the SYLK file.

ltem	Explanation
Info_MACAddress	The MAC address for the device. A string of 12 characters.
	In the batch settings function, this determines whether the device on the network matches the information described in the SYLK file using the MAC address.
TCPIP_IPAddressAuto	Specifies whether the IP address is set manually or automatically.
	For manual this is set to <b>5</b> , and for automatic this is set to <b>1</b> .
